BeGood Supplements Advanced MicroNutrient Drops

contains a wide variety of micronutrients that include more than 70 minerals, trace elements, trace minerals, 18 micro-amino acids and 30 organic acids.

Proper nutrition and supplementing with this type of trace minerals has many benefits, which include:

- More energy
- More stamina
- More endurance
- Muscle cell repair
- Better mental clarity
- Deeper and more restful sleep
- Better cellular oxygenation and nutrient absorption from food & supplements
- Healthier looking skin, hair and nails
- Optimal bone density and strength
- Pain management
- Anti-Inflammatory support
- Strengthen immune support

ADVANCED MICRONUTRIENT DROPS

The human body is made of water, which accounts for about 60 percent of our body weight. This water is bond by minerals, which runs on electricity. These minerals are synonymous to nuts and bolts that hold every part together so they can function properly. Electrical signals are sent to the entire body by the brain to ensure effective functionality. In fact, nobody can survive without minerals. Every cell in your body has to be replaced every 7-10 years.

Matured over millions of years in the earth. It cannot be replicated in a lab.

BGS Advanced MicroNutrient Drops gives your body minerals that are needed to function. As we age, minerals and cells deplete which equates to all kinds of health problems.

Health & Fitness

Most Fitness enthusiasts know that it is not only the work out that increases muscle mass but other factors such as adequate nutrient intake, recovery and rest periods that are just as important. Proper nutrition supplies the needed building blocks for muscles to grow during the recovery period. One of the most vital and neglected aspects of nutrition as it relates to muscle growth is the lack of vital micronutrients that supply the needed trace minerals, trace elements and organic acids that act as a delivery system for the micronutrients like proteins and vitamins.

BGS Advanced MicroNutrient Drops contain a wide variety of micronutrients including minerals, trace minerals, trace elements and more than 30 organic acids. Extracted from a rare source of prehistoric composted plant matter, BGS Advanced MicroNutrient Drops exists in a much smaller size than conventional trace mineral supplements allowing their molecules to pass through cell membranes and carry nutrients inside the cell far more effectively. Synthetic or manmade minerals or trace minerals are poorly absorbed on a cellular level.

They are therefore removed from our blood and excreted through our urine and lost, or worse, stored in our fat tissue with other cellular wastes that eventually lead to poor stamina, poor endurance and a need for much longer recovery times.

Synthetic mineral supplements lack one very vital component: organic acids! These naturally occurring acids are the key to increasing nutrient activation and absorption from foods and supplements as well as acting as a powerful cellular detoxifier.

Key benefits for Fitness enthusiasts and Athletes supplementing daily with BGS Advanced MicroNutrient Drops include:

- Increases Stamina.
- Muscle cell repair.
- Better Endurance.
- More Effective Recovery.
- Better More Restful Sleep.
- Better Focus.
- Increased Oxygen Absorption.
- Enhanced Healing of Muscle Pulls and Exercise Related Injuries.

BGS Advanced MicroNutrient Drops

Trace minerals function in a vast array of critical biological processes, including oxygen delivery to cells, amino acid metabolism, collagen synthesis, cell growth and differentiation, enzyme formation, immune response, maintaining bone density, circulatory functions, brain oxygenation, muscle response, the transmission of messages through the nervous system, and the utilization of nutrients in food, replacing electrolytes lost through heavy perspiration or diarrhea and many others. It becomes apparent that inadequate trace mineral intake could result in wide variety of health issues and diseases.

There is a volume of scientific information regarding the need for adequate trace minerals in the diet of humans and animals alike. Naturally occurring minerals such as magnesium, copper, manganese, selenium and zinc have shown anti-inflammatory effects in both animal and human studies. The pain often associated with inflammation was shown to be significantly reduced by the addition of an all-natural full spectrum trace mineral supplement. Optimal intakes of trace minerals can reduce individual risk factors for a host of diseases including heart disease. Other studies showed trace minerals from non-plant sources where poorly absorbed and utilized, while those extracted from natural sources showed far better results.

All disease including cancer is the result of poor nutrition, lack of exercise, inadequate rest, stress and the exposure to toxic substances or environments. Inadequate intake of micronutrients especially traces minerals and trace elements are a primary causative factor in the development of disease.

BGS Advanced MicroNutrient Drops are extracted from an all-natural prehistoric plant matter deposit located in the Eastern United States. The manufacturing of Advanced MicroNutrient Drops begins with a double stage, reverse osmosis water purification process, which produces water that has no dissolved solids, alkalinity, carbonates, sulfates or conductivity. This allows for an aqueous medium that can become supersaturated with the natural ingredients contained in our deposit material. The purified water is then passed through our raw material via a proprietary technology. Finally, the product is micro filtered resulting in a trace mineral concentrate of unsurpassed quality and effectiveness.

It is vital to understand that most trace mineral supplements are lacking vital components essential to their proper bio-utilization and effectiveness. That missing link is the organic acids that bind the trace minerals allowing for their optimum utilization. BGS Advanced MicroNutrient Drops are a very complex natural mixture created by millions of years of plant matter breakdown. Unlike other varieties, our product contains ionic, colloidal, angstrom and covalent mineral molecules. This unique diversity in form and structure is a primary reason for their superior content and effectiveness.

ADVANCED MICRONUTRIENT DROPS

Complete Nutrition for Optimal Health

There are over ten trillion cells in the human body. Each of these cells has a very specific and vital purpose. Once every 5-7 years, the human body replaces every cell with new cells (the exception being brain cells). After each new cell is generated, the human body must synthesize DNA to program these cells. DNA synthesis is not possible without MINERALS.

How it Works?

By using cellular nutrition, you're cleaning up your body of toxins, which are helping all your body cells become active again – strengthening the cells by way of sending them minerals and micronutrients.

Benefits from taking *BGS Advanced MicroNutrient Drops*

- Improves Brain Function
- Flu & Cold Protection
- Healthy Skin & Nails
- Reduces Inflammation
- Slows Aging
- More Energy
- Reduces Pain
- Body Detoxifier
- Reduces Stress
- Weight Management
- Better Focus
- Better Eye Health
- Strengthens Immune System
- Restful Sleep

Recommended Dosage

It's a 60-day supply if taken for maintaining optimal health at 10 drops per day – every morning.

It's a 30-day supply if taken for the management of any specific health condition or disease at 20 drops per day – every morning.

Guaranteed Purity Potency

We use filtered water and proprietary methods to carefully extract 33 organic acids and over 70 trace minerals. The use of high temperature of chemical extraction methods might be expedient but would also degrade these desirable constituents. Water is the only substance that contracts our deposit material.

BeGood Supplements employs independent lab testing for pH, total dissolved solids, electrical conductivity, fulvic mineral content, amino acid profile, organic acids, hydrogen, nitrogen, carbon, heavy metals, mineral and trace elements, as well as mold, microbes and contaminants.

Since 2010, we have tested for insecticides or chemical residues, which have never been detected. The natural occurring pH helps maintain product integrity without the need for preservatives.

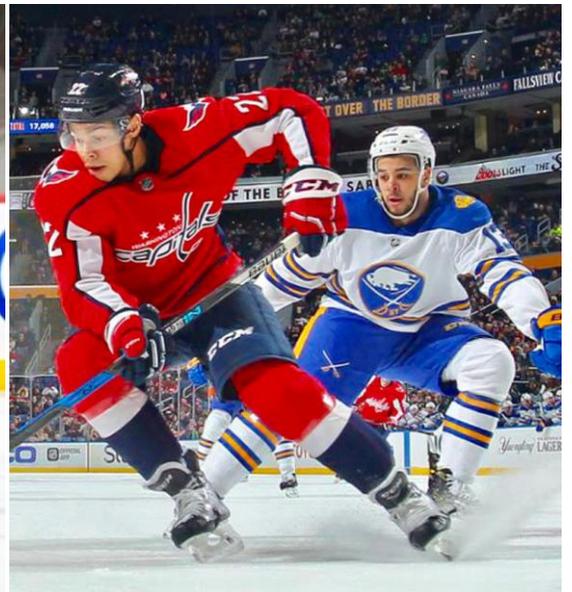

My name is Madison Bowey, professional Hockey player for the Washington Capitals. I've added BGS Advanced Micro Nutrient Drops to my daily program and my thoughts on this liquid mineral supplement have been very positive. My focus, energy, stamina has increased exponentially and my recovery time after games has reduced significantly. BGS Advanced Micro Nutrient Drops is an excellent product and I will continue to consume daily.

Thank you,

I'm Dr. Etienne Callebout, a known alternative cancer specialist in the United Kingdom. Trained as a medical doctor, I have also achieved qualification in acupuncture, homeopathy, naturopathy, cranio-sacral therapy and other natural approaches in order to offer my patients the most well-rounded and best care possible during their healing process. I use naturopathic medicine to compliment orthodox treatment and I am always seeking new and effective herbal solutions. I have found the natural supplement BGS Blood Sugar Support that helps to minimize symptoms of diabetes, and BGS Blood Pressure Support, which reduces high blood pressure to be highly effective with a 92% efficacy. In addition, BGS Mood Support has been extremely effective in the treatment of depression and anxiety. With respect to BGS Advanced Micronutrient Drops (AMD), they contain a wide variety of micronutrients including minerals, trace minerals, trace elements and more than 30 organic acids and extracted from a rare source of prehistoric composted plant matter.

Advanced Micronutrient Drops (AMD) exist in a much smaller size than conventional trace mineral supplements allowing their molecules to pass through cell membranes and carry nutrients inside the cell far more effectively. Synthetic or manmade minerals are poorly absorbed on a cellular level. BeGood Supplements liquid trace mineral complex has provided superior health benefits for a myriad of health conditions and diseases. As BGS owns the shale/mine that produces these exclusive minerals, the efficacy is at its highest level. Simply stated, BeGood Supplements work.

Since discovering these supplements, my patients and I have been experiencing excellent results. BeGood Supplements professional grade nutritional supplements have been extensively researched and are evidence based and clinically proven to work. If you are suffering from any of these health conditions or another, or if you simply want to reduce the risk of getting these diseases, you must try these products. I truly believe BeGood Supplements products are some of the best herbal remedies offered in the world today.

Sincerely,

Etienne Callebout M.D.
